IronPdf 2020.10.3.3

IronPDF allows developers to create, edit and extract PDF content in .NET Standard, Core and Framework projects.

The Iron PDF library takes the frustration out of generating PDF documents by not relying on proprietary APIs. "Html-To-Pdf" renders pixel-perfect PDFs from open standard document types: HTML, JS, CSS, JPG, PNG, GIF, and SVG. In short, it uses the skills that developers already possess.

Generate PDFs:
* "Html-To-Pdf" creates PDF files from HTML, CSS, JavaScript, and images.
* "Url-To-Pdf" generates PDFs from existing HTML pages by simply providing the URL.
* "ASPX-To-Pdf" converts ASP.NET web forms directly into downloadable PDFs.
* "Image-To-Pdf" creates PDF documents from image files.
* HTML forms become PDF forms.

Extract data from PDFs:
* Render image files from PDF documents with PDF to Image functionality.
* Fill and read data from PDF forms.
* Extract text and images from existing PDFs.

Edit PDFs:
* Load and parse PDF documents.
* Merge, Split and Manipulate PDFs to edit PDF structure and content.
* Add Page Numbers, Headers, Footers, Annotations, Bookmarks, Watermarks, Text & Image Assets.
* Edit, Stamp and Watermark PDF files with text, images and HTML.
* Apply HTML backgrounds to PDF pages.

Secure PDFs:
* Add & Remove PDF owners and user passwords.
* Set PDF metadata and security permissions.
* Provide Digital Signatures.

Fully Supports:
* .NET Framework 4.0 or above on Windows & Azure
* .NET Standard 2.0 & Core 2 & 3 on Windows, MacOS & Linux & Azure
* Cloud hosting services including Microsoft Azure, Docker, and AWS

IronPDF can be used within ASP.NET Core, Standard and Framework projects for MVC, Web, Console, Cloud, Service, Function & Desktop Applications.
